

Thermal solutions for the

Building & construction industry

Optimise day-to-day operations

Combitherm provides you with effective thermal solutions that address sustainable development in the building and construction industry allowing you to ensure the correct temperature of asphalt, concrete elements or when working outdoors with concrete, mortar and casting foundations.

Stabilisation of temperatures requires effective thermal solutions

During the production process one of the critical issues in the building and construction industry is the stabilisation of temperatures. In the concrete industry, it is essential that temperature development during curing of concrete elements take place under controlled conditions. Otherwise, there is a risk of cracks in the concrete, leading to deterioration of the element's quality and strength.

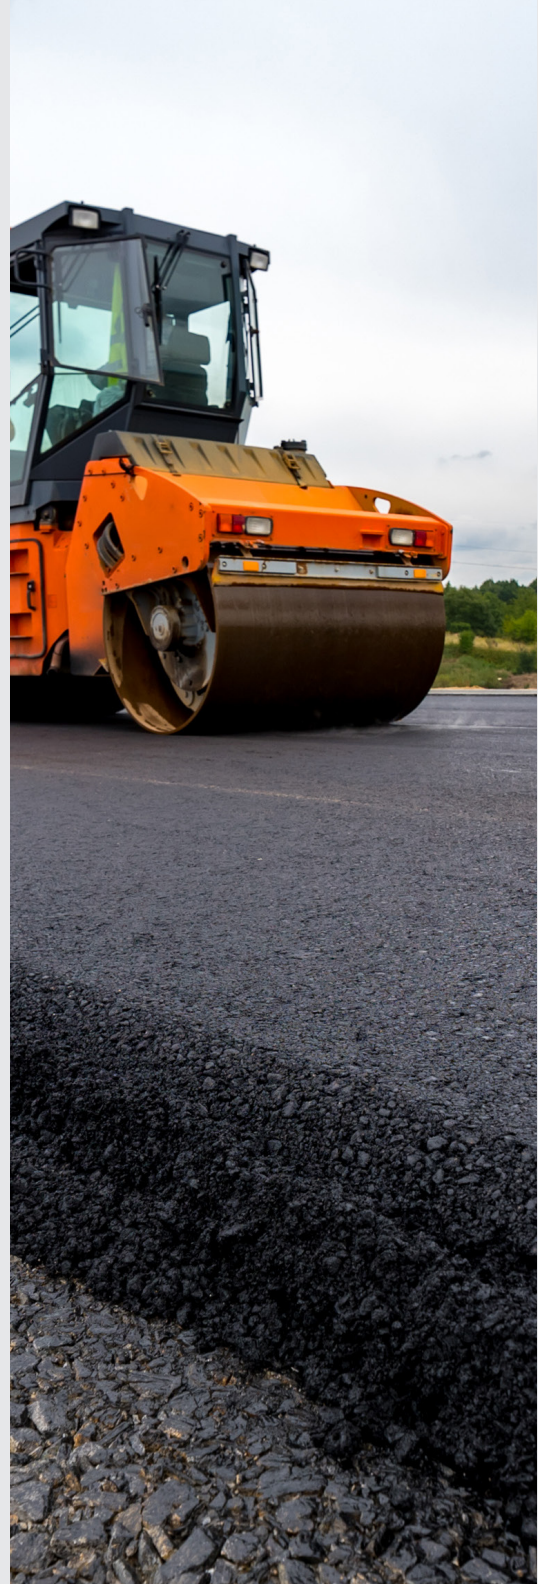

It can be a challenge to ensure the correct temperature in the concrete elements, particularly during the cooler months. This also applies to construction companies that need to transport hot asphalt and maintain a high temperature while driving all day.

Eco-friendly thermal solutions contribute to sustainable operation

Sustainable awareness is playing an increasing role at many companies in both Denmark and the rest of the world. In this respect, companies look at several environmental factors in day-to-day operations, not only in terms of the consumption of water, electricity and heat as well as choice of building materials, but also the way in which waste is managed and disposed of. Here it is an advantage to use insulation solutions with a long shelf-life and in eco-friendly materials that can be reused and disposed of sustainably or reused.

Thermal solutions for your tasks

We have more than 40 years of experience in developing effective thermal solutions that meet the needs for temperature protection in the building and construction industry. Our range includes our winter mats, concrete duvets, asphalt duvets and insulation covers, all of which are effective in ensuring optimal temperature conditions.

Strong solutions and collaborations

WEBER
BETONWERK

For more than 60 years, Weber Betonwerk GmbH has stood for innovative products and comprehensive service at all levels. The company offer a wide range of high-quality precast concrete elements for residential and commercial construction.

We clearly see the advantages of using thermal concrete duvets, as opposed to PE foil. The heat for the curing process is kept more stable and condensate is not a problem.

Kevin Knobloch, Quality Manager at Weber Betonwerk.

HauCon in Lystrup, Denmark, supplies a wide range of products and solutions for contractors and the construction industry. Their thermal winter mats are a particularly important product, which they have been buying from Combitherm for 33 years..

HAUCON®

They are the best on the market. They are better insulated, and the insulation is fixed to the foil, so they can be used horizontally and vertically. Combitherm winter mats are also the most environmentally friendly, as they have a long service life and can be recycled.

Jakob Knudsen, Sales Manager at HauCon.
