Truck partitions

Efficient transport of goods with different temperature requirements

In the transport industry, shipping temperature-sensitive goods with different temperature requirements in the same truck can be a challenge.

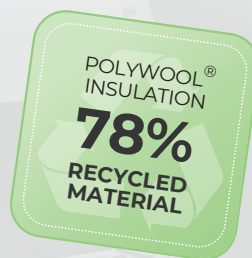

Combitherm thermal truck partitions are an effective solution that ensures an easy and flexible separation of the cargo space in, for example, refrigeration and freezer zones, so that the various types of goods achieve optimal temperature conditions for the benefit of both delivery quality, economy and the environment.

Quality, Inside Out

Combitherm thermal truck partitions have been developed with a focus on quality and durability. The thermal solution is based on a strong multi-layer construction with efficient Polywool insulation with spiral polyester hollow fibres and a selection of foils, which, together with the insulation, ensure optimum insulation between the individual parts of the cargo hold.

Noticeable advantages

- Insulation made of 78% rPET fibres
- Option of food-approved foil
- Efficient utilisation of the vehicle fleet
- Light, flexible and easy to adapt to the amount of goods
- Optimise transport of goods with different temperature requirements
- Continuous reduction of the cooling zone reduces energy consumption

°COMBITHERM

Customised thermal solutions

Individual design and high flexibility ensure easy handling and division of the truck into several temperature zones when transporting goods with different temperature requirements.

Combitherm thermal truck partitions are available in four standard types and can be manufactured in various sizes tailored to individual transport conditions and the specific needs of each customer.

All partitions are supplied with 10 cm. bent edge as a seal, as well as double bottom reinforcement.

Caring about the environment

An uncompromising choice of materials and a proven design mean that Combitherm thermal truck partitions have a long lifespan and can be reused time and time again.

Polywool insulation consisting of 78% recycled fibres helps to increase sustainability and overall the effective insulating ability means that the thermal truck partitions fulfill all needs for effective protection of different types of goods during transport.

Technical specifications

Three-layer construction of:

Foil: MET, PP or TEX-PUR

Insulation: Polywool PET (polyester fibers) with up to 78% rPET, 400 g/m²

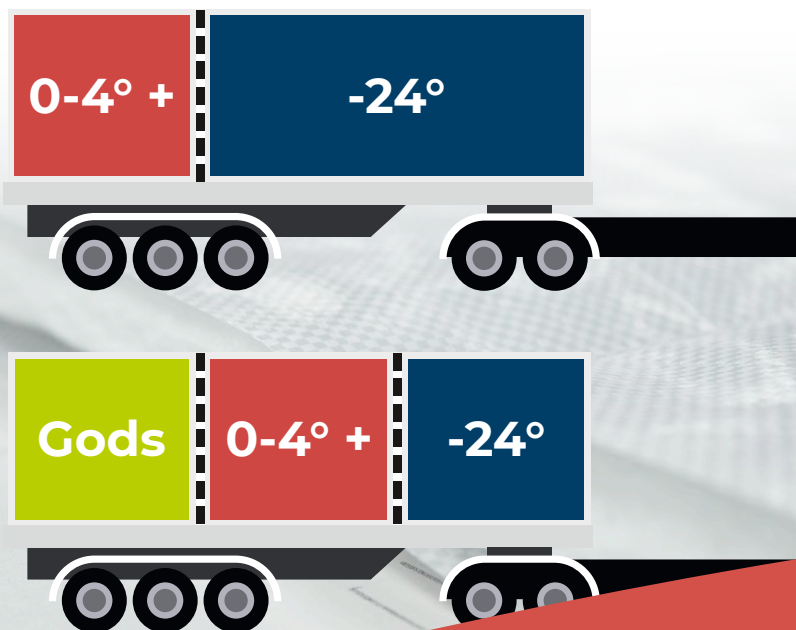

Colour:

MET foil: Silver with black edging

PP foil: Natural white / silver grey with black edging

TEX-PUR foil: Silver grey with silver grey edging
